

TECH-FLO® GAMMA
0-10-0 + MAGNESIUM

Available Phosphoric Acid (P ₂ O ₅).....	10.0%
Calcium (Ca).....	4.0%
Magnesium (Mg).....	5.0%

*P₂O₅ derived from metallic orthophosphates. Calcium derived from phosphate and chloride.
 Magnesium derived from phosphate and oxychloride.*

PRODUCT DESCRIPTION

TECH-FLO GAMMA is a flowable foliar nutrient consisting of neutral, chemically-reacted components that have been micronized and formulated in a stable aqueous dispersion. The active ingredients are present as finely ground particles that are slightly soluble in water. These particles release nutrients over a prolonged period of time. This property makes TECH-FLO GAMMA suitable for application on all types of crops to provide extended feeding during the growing season.

Because of its extremely fine particle size, TECH-FLO GAMMA is effective at lower rates than wettable powder products. It is non-abrasive, mixes readily in water, and stays well dispersed in the spray tank. Its dried deposits adhere strongly to foliage and resist washing off by rain or overhead irrigation. Because it is a dispersion, TECH-FLO GAMMA supplies more nutrients and provides longer feeding than liquid products, and it is non-corrosive.

GENERAL USES

TECH-FLO GAMMA is recommended for use on crops and in areas where **Magnesium** has been found to be beneficial. It is useful for increasing Magnesium levels---for example, when Magnesium chlorosis exists or when tissue analysis indicates a need for Magnesium. It is suggested for use when high Potash levels have depressed Magnesium and/or Calcium levels. It is also suggested for use with TECH-FLO SIGMA when Potash is desired but there is concern for maintaining Calcium and Magnesium levels in an optimum range. In cases where Magnesium levels are low but Calcium levels are optimum, TECH-FLO GAMMA may be used to increase Magnesium without causing Calcium levels to fall out of the optimum range as might be the case when Magnesium is the only nutrient applied. Or it may be used to supply Calcium when the reverse situation exists.

*FOR SPECIFIC CROP RECOMMENDATIONS INCLUDING MATERIALS, RATES, AND TIMING, PLEASE
 READ THE PRODUCT LABELS AND CONSULT A NUTRI-TECH REPRESENTATIVE.*

APPLICATION METHODS

TECH-FLO GAMMA may be applied by any type of spray equipment. It is suitable for by dilute and concentrate ground rigs, and for aerial application by fixed wing or helicopter. Pre-bloom or early season applications are recommended for most crops, but it may be applied at any time during the growing season to supply the nutrients contained.

COMPATIBILITY

TECH-FLO GAMMA is compatible with many commonly used pesticides, so it may be added to crop protection sprays when the timing of application coincides. It may be combined with TECH-SPRAY products and with other TECH-FLO formulations when additional nutrients are needed.

PLEASE CONSULT A NUTRI-TECH REPRESENTATIVE FOR DETAILED COMPATIBILITY INFORMATION.

CAUTIONS

STORAGE: Do not store at temperatures below 40°F. Do not expose to temperatures below 32°F.
